December 3, 2021

ACME Anvils and Supplies Incorporated Network Plan – Final Project

Executive Summary

The purpose of this document is to provide Acme Anvils and Supplies Incorporated recommendations on how to build, configure and manage an information technology network and the associated user ID, groups, hardware, software, and firewall configurations to support its business operations. This IT network design physically covers Acme Anvils and Supplies' corporate offices in San Bernardino, CA, and its production and warehouse facility in Loma Linda, CA. It also provides specifications on setting up 32 users, user IDs, user groups, and associated levels of access, and this document provides firewall configurations.

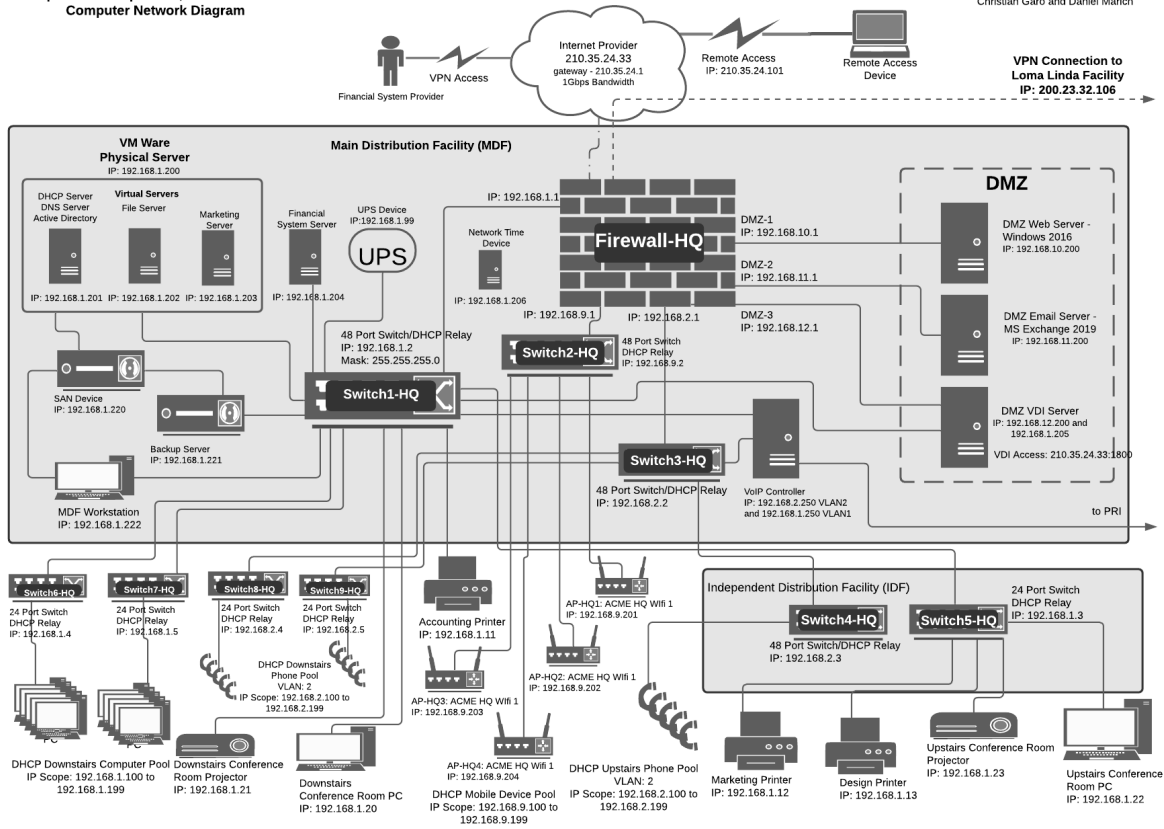

This proposal makes the general assumption of creating a computer network with the highest quality information technology hardware with the intent of developing a network that will be robust, secure, and flexible to meet the needs of Acme Anvils and Supplies Incorporated over the next ten years. Within this in mind, there are many areas in this proposal that money can be saved as the owners discuss the return on making this investment. If need be, costs can be cut by lowering the quality of the workstations, switches, servers, and firewalls in that order. At this time, though, we recommend making the highest quality investment in Acme Anvils and Supplies Incorporated future as recommended in this proposal.

Network Diagrams

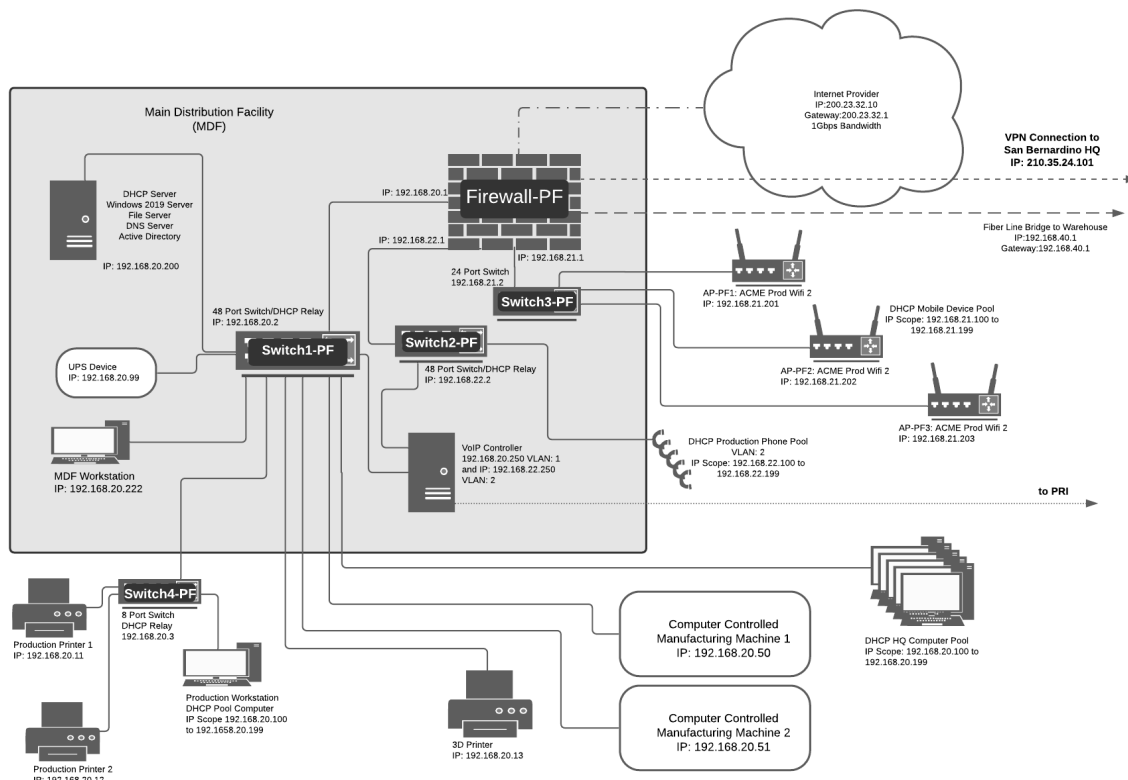

As detailed in the Network Maps below (large versions are located in Appendix 1), we have proposed three distinct firewalls at every major facility: San Bernardino HeadQuarters (HQ), Loma Linda Production Facility (PF), and Loma Linda Warehouse facility (WF). The firewalls at the two Loma Linda facilities are connected via a physical fiber line strung between the buildings (eventually a conduit should be laid between the facilities if the property is owned by the company). The firewalls between the HQ and PF are connected via a VPN connection over the Internet.

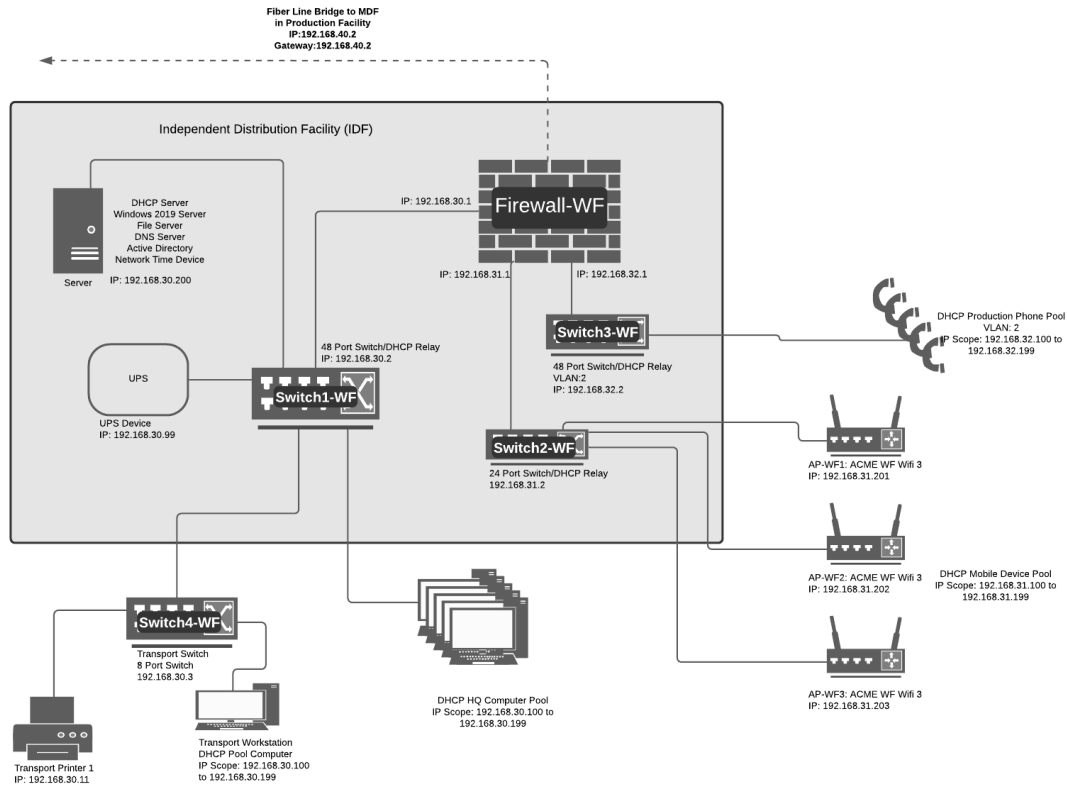

Each location has a PRI line that connects to a VoIP controller located in MDF. This line which can be provided by companies like Spectrum Enterprises or AT&T Business, can handle up to 23 simultaneous calls. The phone system is an IP address-based phone system that exclusively on VLAN-2, all other devices on the network not associated with phones run on VLAN-1. All IP phones are directly connected to a POE+ switch to provide power to the phone.

HQ Offices - San Bernardino Network Map

Loma Linda - Production Facility Network Map

Infrastructure Information

Network

The proposed compute network consists of 32 workstations, up to 23 simultaneous active phone lines at each physical location, three Juniper SRX Series firewalls, 17 Cisco switches of different sizes, and HPE SAN device, eight HPE ProLiant DL160 Gen10 Servers, and an HPE ProLiant MicroServer Gen10 Plus running VMWare. The proposed network consists of nine subnets and three DMZs all running as Class C networks. For a complete list of all IP addresses and associated devices please see Appendix 1. All subnets meet at a firewall/router that dynamically routes traffic to the appropriate subnet unless denied by Active Directory security group policies. Please see Appendix 2 for a detailed hardware list. Unless stated otherwise the cabling for the network will be Cat6 and Cat6 POE+ for IP phones and access points.

Access Points are wired via POE+ Cat6 cables and are evenly placed throughout their respective facilities. Please refer to Appendix 3 for detailed placement. There are three wall outlet access points in the Production facility and three wall outlet access points in the Warehouse facility at Loma Linda. The HQ in San Bernardino has four ceiling access points with two per floor. DHCP for Wireless and login procedures for the access points are handled by the primary Windows Server 2019 DHCP controller, and there are two levels of access: employee and guest.

DHCP Pool Assignments

All IP address assignments are static except for the listed DHCP Pools Assignments listed below. DHCP is handled by the Windows 2019 App Server at each location. Note that the DHCP Pool assignments for IP phones are on VLAN-2, all other DHCP Assignments are on VLAN-1.

DHCP Pool Assignments				
DHCP IP Scope	Device Pool	Location	Hardware	VLAN
192.168.1.100 to 199	HQ Workstations Pool	HQ	HP Workstation Z2 G5 SFF Desktop	
192.168.2.100 to 199	IP Phone Pool on VLAN2	HQ	Cisco SPA303-G1 3 Line IP Phone	VLAN-2
192.168.9.100 to 199	HQ Mobile Device Pool	HQ	Custom Devices	
192.168.20.100 to 199	PF Workstation Pool	PF	HP Workstation Z2 G5 SFF Desktop	
192.168.21.100 to 199	PF Mobile Device Pool	PF	Custom Devices	
192.168.22.100 to 199	PF IP Phone Pool	PF	Cisco SPA303-G1 3 Line IP Phone	VLAN-2
192.168.30.100 to 199	WF Workstation Pool	WF	HP Workstation Z2 G5 SFF Desktop	
192.168.31.100 to 199	WF Mobile Device Pool	WF	Custom Devices	
192.168.32.100 to 199	WF IP Phone Pool	WF	Cisco SPA303-G1 3 Line IP Phone	VLAN-2

Storage Area Network

The proposed storage area network solution is a self-contained system produced by Hewlett Packard. The HPE StoreEasy 1660 has 32TB SAS Storage, and it will be connected directly to the VMware server, and the backup device.

Backup Solution

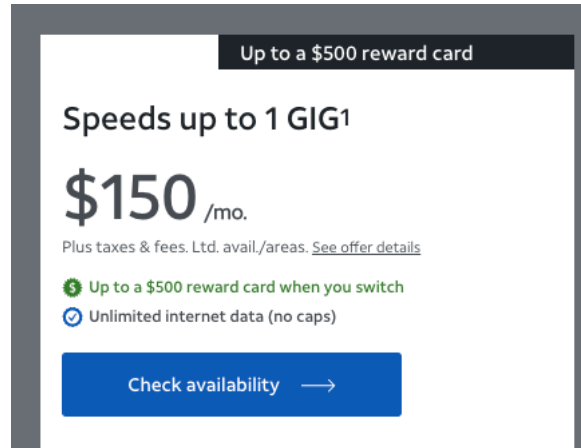

This proposal recommends scheduling full backups once a week with incremental backups scheduled every night. The backup device would be a HPE StoreOnce 3620 - Storage enclosure - 6 bays - HDD 4 TB x 6 - rack-mountable - 2U

Workstations

All workstations are standardized to one model, HP Workstation Z2 G5 SFF Desktop - Intel Core i5-10500 3.10GHz, vPro, 8GB DDR4, 256GB SSD, and run Windows 10 along with a copy of MS Office 365. They come with a 27" Full HD 1920 x 1080 60 Hz HDMI, USB Built-in Speakers Monitor. Please refer to Appendix 3 for approximate workstation placement.

Internet Speeds

The speeds we plan on receiving from our provider are 1 Gbps. This plan will be offered by AT&T Business Fiber.

Firewall Configurations Rules

The Firewall will be configured to Class C networks, with a default mask of 255.255.255.0. Configuration of Firewall Policies can be created by the network administrator. The network administrator will create policies to aid in the control of traffic of anyone within the organization to access network resources and decrease the possibility of malicious acts and breaches. We must start with the most important rules at the top of the rule base. It should mimic the following:

1. Least Privilege

Implementing least privilege allows the network administrator to have control of the organization's traffic. It is best practice to only approve traffic in-line with the organization and deny the rest.

2. Define Rule Base

The following policies will be followed:

- a. Deny all use of USB drivers are prohibited for all departments
- b. Remote access will only be granted for:
 - i. Marketing to Marketing Server
 - ii. Management to all Servers
- c. Grant everyone has access to the Intranet (besides Interns)
- d. Grant everyone has access to the Internet (including Interns and Visitors)
- e. Deny all from accessing all social networking sites: e.g., Facebook, Twitter, MySpace, TikTok, Pinterest
- f. Everyone is blocked from accessing gambling and inappropriate sites: e.g. NSFW domains, fanduel

3. Network Shares

Management users have access to all servers from San Bernardino and Loma Linda servers. Marketing users have access to marketing servers only. Everyone has access to Intranet, other than interns and guests accounts. Everyone has access to the Internet.

POLICY NAME	SOURCE IP	SERVICE	ACTION	LOG
INTERENT	EVERYONE	DNS, HTTPS	ACCEPT	YES

Use Logging

Log all firewall policies. Logging allows a trail of all network activity to be generated and followed. This is useful in diagnosing and troubleshooting.

Use Network Time Protocol (NTP)

NTP synchronizes the clocks of all devices within the organization that is on the Internet. By synchronizing the clocks, logs will be more useful to diagnose and troubleshoot more efficiently. If the clocks are not synchronized, it is more difficult to understand what and when a problem occurred and for scheduled procedures to be executed. We propose purchasing TimeMachines' NTP Network Time Server with GPS, TM1000A.

Audit Software and Firmware

Auditing software and firmware regularly will ensure the programs are operational and configured to organization standards. Implementing a weekly check of software and firmware will help identify holes within the security and changes that need to be made.

Remote Access

Remote Access will be granted to groups with Top Secret or Secret security clearance. Must be renewed bi-yearly. The in-house VDI server will be accessible for remote users.

Individuals can be added to the Remote Access list with approval from their direct supervisor. In order for an individual without a Top Secret or Secret clearance, we require the reason for the need for Remote Desktop, a valid CyberSecurity training certificate that has been completed within one year of the request, and a signature from a supervisor holding a Top Secret or Secret security clearance. The administrator will review the Allow log every two weeks to ensure Roles, Clearances, and Permissions have been changed or expired.

SSL Solution

The built-in web filter Websense will run SSL to secure data transmission over the internet. It is the leading standard and verifies all certificates through a certificate authority. The Certificate will be pasted into our web server and modify the site to use HTTPS.

VPN

VPN access will be given to Users with a Top Secret or Secret security clearance, remote employees, and Financial System Advisors. This access is given to these users to access internal applications and data. In addition, due to the multiple locations that these authorized users can have a shared network between the different locations. The implementation of the VPN will aid in the security and potential snooping of sensitive data when an individual is using the public Internet.

For VPN access, it is possible for individuals to be added to the Remote Access list with approval from their direct supervisor. In order for an individual without a Top Secret or Secret

clearance, we require the reason for the need for Remote Desktop, a valid CyberSecurity training certificate that has been completed within one year of the request, and a signature from a supervisor holding a Top Secret or Secret security clearance.

Specialty Equipment

We recommend a network time device to handle the synchronization of all servers and associated network devices. We propose purchasing TimeMachines' NTP Network Time Server with GPS, TM1000A. In addition, the 3D printer would be considered a specialty equipment that should be selected by the owner to meet specific business requirements.

Wi-Fi Policies

There will be two Wi-Fi Networks, one for employees and one for guests at each facility.

- For San Bernardino HQ the SSIDs are AMCE-HQ Wi-Fi Emp and AMCE-HQ Wi-Fi Guest
- For Loma Linda Production facility the SSIDs are AMCD-PF Wi-Fi Emp and AMCE-PF Wi-Fi Guest
- For Loma Linda Warehouse facility the SSIS are AMCE-WF Wi-Fi Emp and AMCE-WF Wi-Fi Guest

For all uses of the Wi-Fi network will have to login via a Web page that loads upon connection. Employee passwords are the same as their network password, and a guest will have a temporary password generated for one day's use. Employees will be able to access the same network shares that they can via their desktop Windows login, and guest users will be able to only access the Internet through access can be given to other devices on a case-by-case basis.

Applications

The HPE Proliant Micoserve is running VMWare vSphere 7.0.2 and the three virtual servers it hosts are running Windows Server 2019. All other servers are running Windows Server 2019 except for the Web Server in DMZ 1 which is running Windows Server 2016. In addition, certain servers for specific groups run custom software. For example, the accounting department has a server that runs its financial software system on top of Windows 2019. Every Windows Server 2019 server that handles DHCP also handles access to MS Office 365.

San Bernardino HQ				
IP Address	Type	Name	Location	Applications
192.168.1.200	Blade Server	VMServer1-HQ	HQ-MDF	VMWare vSphere
192.168.1.201	Virtual Server	APP-Server-HQ	Blade Server	Windows 2019/DHCP Server/File Server/DNS Server/Active Directory
192.168.1.202	Virtual Server	File Server	Blade Server	Windows 2019
192.168.1.203	Virtual Server	Marketing Server	Blade Server	Windows 2019
192.168.1.204	Physical Server	Financial System Server	HQ-MDF	Windows 2019
192.168.1.205	Physical Server	DMZ VDI Server	HQ-MDF	Windows 2019
192.168.1.250	Physical Server	VoIP Controller	HQ-MDF	Windows 2019 - VoIP Controller Software
192.168.10.200	Physical Server	DMZ Web Server	HQ-MDF	Windows 2016

Loma Linda Facilities				
192.168.20.200	Physical Server	App-Server-PF	PF_MDF	Windows 2019/DHCP Server/File Server/DNS Server/Active Directory
192.168.20.250	Physical Server	VoIP Controller	PF-MDF	Windows 2019 - VoIP Controller Software
192.168.30.200	Physical Server	App-Server-WF	WF-IDF	Windows 2019/DHCP Server/File Server/DNS Server/Active Directory

Users

Individual users

The creation of domain user accounts will be created for all registered employees of Acme. These individual users will use their User IDs to access any computer. According to the User IDs security clearance, individual accounts will be granted access to resources and servers. All guest and intern users will be able to access the guest accounts on any computer. The only access a guest account is granted is the Internet.

Groups

Groups will be configured according to:

1. Location (e.g., San Bernardino HQ, Loma Linda)
2. Executive Team
3. Union
4. Supervisors
5. Departments (e.g., management, accounting, marketing, production, transport, and design)
6. Security Clearance (e.g., Top Secret, Secret, Unclassified, Classified, None).
7. Intern
8. Guest

User ID

User IDs will be configured by the first two initials of your first and last name, followed by their employee identification number. For example, President/Owner: Wyl E Coyote, employee identification number: 00001. Wyl E Coyote's user ID would be "wyco00001".

By following these rules, every employee will have an individualized user ID to themselves.

Security Groups

Within Active Directory, Security Groups will be defined. This is where permissions will be assigned to gain access to resources within the network. Individuals with Top Secret and Secret

Security Clearance will have Read, Write, Delete permissions. Individuals with Classified and Unclassified Clearances will have Read and Write permissions. Interns and Visitors will have non-permissions. For additional permissions, it is possible for individuals to be added to the Remote Access list with approval from their direct supervisor.

In order for an individual without a Top Secret or Secret clearance, we require the reason for the need for Remote Desktop, a valid CyberSecurity training certificate that has been completed within one year of the request, and a signature from a supervisor holding a Top Secret or Secret security clearance.

Password Rules

A password must be a minimum of 12 characters long. The password must include at least one upper case letter, one lower case letter, two numbers, and two symbols. A password should never contain personal information, such as employee ID, date of birth, SSN number, name of spouse or children. A forced password reset will be enforced every 180 days.

By following these rules, we can reduce the chances of breaches in security, stolen data, and brute force hacking.

Distribution or Email Groups

Distribution groups will be defined according to the groups above: Location, Executive Team, Union, Supervisors, and Departments. By having an updated distribution list of employees to their respective roles, messages can be received by the right people in a timely manner.

Active Directory Information

Group Policy Objectives

GPO OBJECTIVES	
ACTION	OPERATING SYSTEM AFFECTED
PROHIBIT USB DRIVERS FOR ALL DEPARTMENTS	ALL WORKSTATIONS

ENABLE ACCESS TO MARKETING SERVER	MARKETING USERS GROUPS

Summary

This document is a comprehensive recommendation to build, configure, and manage an information technology network and associated user ID, groups, hardware, software, and firewall configurations to support business operations for Acme Anvils and Supplies Incorporated. This proposal provides a high-end, high-quality network hardware solution to give Acme Anvils and Supplies a return on investment that will last the company well into the next decade. It also provides users, groups, firewall configurations, and wireless access policies that maximize security without inhibiting business operations. We are confident that if the recommendations in the document are followed, Acme Anvils and Supplies Incorporated will be well prepared to compete in the anvil manufacturing industry for years to come.
